* Minor changes due to rounding differences between calculations for ISS-2 and ISS Web edition this leads to very small changes typically:-

Prevalence data the differences are typically only 0.1%

Consumption the sales data changes are typically 1 million cigarettes or 1 tonne which leads to only a 4th decimal place change in Number/adult/day values.

4) Excel 2010 compatibility updates

Previous versions of IMASS have only been tested on versions of Excel up to Excel 2007 for this version (IMASSv4.11) testing was extended to include Excel 2010. During this testing it was noted that Excel 2010 would regularly crash. The problem was traced to a bug in Excel 2010 which sometimes crashes when attempting to calculate an individual worksheet. This problem appears to be confined to Excel 2010 as no problems have been seen on earlier versions of Excel.

As a result of this the IMASS VBA code has been updated to work around the Excel 2010 bug by specifying a range of cells on a worksheet to be recalculated rather than allowing Excel to calculate the complete worksheet.

The main problem was due to the calculating the "Selection Data" worksheet like this:-

`Sheets("Selection Data").Calculate`

That VBA code would work on first opening a country but after that country was closed Excel 2010 would crash next time the calculate code was executed. The workaround is to calculate a specified range of cells so that code has been changed to this:-

`Sheets("Selection Data").Range("A1:AC250").Calculate`

Other areas of code have been modified to give added consistency such as ensuring the keyword "Call" is always used when invoking a subroutine

IMASSv4.10 (15th January 2013)

IMASSv4.09 (30th January 2012)

Introduction

IMASSv4.09 includes updated Tobacco sales data from the recently updated ISS Web edition country chapters:-

Australia, Canada, United Kingdom and USA

Release Notes

1) The main IMASS workbook IMASS.xls (30.01.2012) has been updated to include the revised version number IMASS v4.09

2) WHO Population & Mortality Updates (IMASS v4.09)

No update of mortality data from WHO was included in this release.

See the release notes for IMASSv4.07 for a list of available mortality data.

No update of population data from WHO was included in this release but adult population was extended (using a copy of the most recent year available) to allow consumption (per adult per day) for 2006-2010 to be calculated using the latest tobacco sales:-

Canada Canada.xls Updated 26th Jan 2012
Consumption (per adult per day) for 2006-2010 are based on population from 2005

USA USA.xls Updated 26th Jan 2012

Also corrected formulae in [Tobacco Data] for calculating single year (per adult per day) values some of which, had been using female adult population from RP1 (col V) rather than the updated values in (col U). The single year data is only there for comparison against ISS-3 so these changes will not affect the main IMASS workbook as that uses the period values which were calculated correctly

IMASSv4.04 (18th Mar 2009)

Introduction

IMASSv4.04 includes updated smoking statistics (prevalence & CPP) and tobacco sales data from current ISS-3 Web edition countries.

Some new plots have been included to display data by years (rather than period). These new plots have associated data tables which replace the single year data tables introduced in IMASS v4.03.

Release Notes

1) The main IMASS workbook IMASS.xls (18.03.09) has been updated to include the revised version number IMASS v4.04 along with new plots and data tables for mortality and sales data by year:-

Mortality:-

Year and Age Group
Sex and Year

Consumption:-

Year and Sales

These plots use the same plot settings as for period plots but show data for each year within the selected period

2) The following country workbook has been updated to include updated smoking statistics and sales data in line with the ISS-3 Web edition

IMASSv4.03 (26th Jan 2009)

Introduction

IMASSv4.03 Includes updated population and mortality data from WHO along with updated smoking statistics (prevalence & CPP) and tobacco sales data from current ISS-3 Web edition countries. A new section has been added to display single year tables for mortality and sales data.

1) The main IMASS workbook IMASS.xls (15.01.09) has been updated to include the revised version number IMASS v4.03

2) Single year mortality and sales tables introduced for all countries

3) Implemented consistent policy for handling missing population and calculating single year tobacco sales data values.

Minor changes only in the following workbooks:-

Australia.xls: population (15+ only) 2004 copy of WHO from 2003

Canada.xls: Reintroduced calculation for [Tobacco Data] number/adult/day figures rather than taking values direct from ISS. This resulted in slight changes for MC, TC & A Number/adult/day single year values for 2002-2004. 5 Year periods remain unchanged.

Czechoslovakia.xls: population (15+ only) 1992 copy of WHO from 1991

Denmark.xls: population (15+ only) 2006 copy of WHO from 2005

Germany.xls: population 2005-2007 (from www.gbe-bund.de)

Yugoslavia.xls: Removed individual age groups population 1991- 1993 (Pop 15+ remains unchanged as copy of WHO 1990)

IMASSv4.02 (15 Nov 2007)

(IMASS.xls 15 Nov 2007)

1) Prevalence plot settings problems fixed. When spacing of plot settings tick boxes increased (see IMASS v3.02) some tick boxes became offset relative to their legends and as such were controlling the wrong lines as follows:-

a) Prevalence plots were not displaying all the requested Birth Cohort lines as set in plot settings. This was due to prevalence plot settings Birth Cohort tick boxes calling incorrect macro functions, these have been corrected in IMASS v4.02

b) Prevalence plots were not displaying all the requested Sex lines as set in plot settings. This was due to prevalence plot settings Sex tick boxes calling incorrect macro functions, these have been corrected in IMASS v4.02

c) Prevalence country rank plots were not displaying all the requested Country lines as set in plot settings. This was due to prevalence plot settings Country tick boxes calling incorrect macro functions, these have been corrected in IMASS v4.02

IMASSv4.01 29th Oct 2007

Introduction

IMASSv4.00 included Population & Mortality updates from WHO for all countries but smoking and sales data remained unchanged from IMASSv3.02. (see below)

IMASSv4.01 is the first release to include updated smoking statistics (prevalence & CPP) and tobacco sales data from current ISS-3 Web edition countries. Future releases of IMASS will be issued on a rolling basis as the web edition chapters are published.

1) The main IMASS workbook IMASS.xls (24.20.07) has been updated to include the revised version number IMASS v4.01

2) The following country workbooks have been updated to include updated smoking statistics and sales data in line with the ISS-3 Web edition

Australia (Australia.xls 24.10.07)

Data from ISS-3 web edition. H:\ISS3\Australia\Australia_061219\Supplement which is the same as the published version of the chapter but with the addition of the CPP Standardized tables and CPP period worksheets.

IMASS v4.00 27th Sept 2007

1. IMASS v4.00 contains updated population and mortality data from the World Health Organisation (WHO) as of 17 Nov 2006.

We (PNLSC) have also made some minor changes to pre-1950 population estimates in some countries to bring IMASSv4.00 and the International Smoking Statistics Web edition (ISS3) in line. (See country workbooks for detailed change history. ISS3 Methods chapter appendix I p. 23 describes the new method of estimation, although it is applied there only to countries for which web edition chapters have been published whereas in IMASSv4.00 it applies to all countries)

IMASS v4.00 includes the following country updates:

NOTE:

Pop: UK is made up of England & Wales (UKEW) Scotland (UKSC) and Northern Ireland (UKNI). Population 2003 is missing from WHO data for UKEW so can't generate an overall UK value. The best we can do for IMASS is interpolate between 2002 and 2004 which is what we will do.

Mort: Mortality is missing from WHO data for UK 2000 because UKSC uses ICD10 where as UKEW & UKNI use ICD9 therefore cannot unify these for combined UK. As we have defined equivalent ICD codes for each IMASS disease for the various ICD revisions, we can generate mortality values for these diseases for the three component countries. These can then be added together to give an overall UK value. This has been done for 1998 to 2004 and comparing the 1998, 1999, 2001-2004 values against the WHO UK values shows there are no differences. This gives us confidence in the method and as such can use the 2000 value in IMASS.

IMASSv3.02 30.01.07

(IMASS.XLS 30.01.07)

1. Excel 2003 compatibility issues fixed including the following
 - a) Excel 2003 crashing during closure of workbooks.
This was fixed by simply opening and saving IMASS.XLS using Excel 2003.
 - b) Plot setting tick boxes not handled correctly under Excel 2003
IMASS uses closely spaced tick boxes, these were handled correctly under Excel 2002 but Excel 2003 gives problems inaccurately selecting these. This has been fixed by increasing the spacing between tick boxes.

IMASSv3.01 23.05.06

(IMASS.XLS 23.05.06)

1. Dropdown menu corrections in main IMASS workbook
 - a. [Combination Tables] Data table "Consumption & Mortality vs Period"
Corrected [Age group or Cohort] dropdowns "Combined Age Group" entry
(Note: they were correctly shown on the associated combination plot dropdowns).
 - b. [Combination Tables] Data table "Prevalence & Mortality vs Age Group"
Corrected [Sex] selection dropdowns.
They were incorrectly labelled "Sex or Sales", corrected to "Sex", also
"Males & Females (sales)" option removed from dropdowns on Prev Lines
 - c. [Combination Tables] Data table "Prevalence & Mortality vs Period"
Corrected [Age group or Cohort] dropdowns "Combined Age Group" entry
(Note: they were correctly shown on the associated combination plot dropdowns).
 - d. [Combination Tables] Data table "Prevalence & Mortality vs Period"
Corrected [Sex] selection dropdowns.
They were incorrectly labelled "Sex or Sales", corrected to "Sex", also
"Males & Females (sales)" option removed from dropdowns on Prev Lines
 - e. [Combination Tables] Data table "Prevalence & Mortality vs Birth Cohort"
Corrected [Sex] selection dropdowns.
They were incorrectly labelled "Sex or Sales", corrected to "Sex", also
"Males & Females (sales)" option removed from dropdowns on Prev Lines
 - f. [Prev Tables] Data Table "Prevalence of smoking for Country (Rows) and Period
(Columns)"
Corrected [Cohort & Age group] dropdown selections

Note.

The specific source of the standardizing populations (World Standard and European Standard) was mistakenly not included in the documentation of Version 3. It is given here for information only, and will be included in a future release of the documentation.

IMASS v3.00

1. Country workbooks are now opened automatically when required, and Excel background calculations are 'off'. This gives a considerable improvement in performance and ease of use.
2. There is no longer a limit on the number of countries that can be included in a country plot or scatter plot. These plots now operate with an 'Update' button, which triggers the automatic opening of each relevant country workbook in turn.
3. An Index button available throughout to return to the Index sheet.
4. Within the mortality, prevalence and consumption sheets, data settings made through drop-down menus are now shared between pages 1-6, and between pages 7-9, rather than throughout the whole sheet. None are shared between sheets.
5. Ranking is now available on country plots.
6. Colours and symbols have been improved.
7. There is improved consistency in the method of selecting Source (sales or survey) and Sex for consumption data.
8. Plot labels and title are now in worksheet cells (in column AB) to allow for easy editing. Previously this had to be done as a chart edit.
9. In multi country and combination plots, any gap in a data series now shows as a gap on the plot, rather than being bridged by a straight line.
10. Selection of alternative tobacco data sources is now done in the main workbook, accessed via the Index page. Alternative data source added for Spain.
11. Mortality and population data have been updated using WHO data as at 2nd September 2003.
 - a. Although WHO has added provision for the 85+ age group to be split into 85-89, 90-94 and 95+, such data are available only for very recent years, and they remain combined in IMASS. Population data are now available as single persons rather than hundreds, but they remain as hundreds in IMASS.
 - b. This update has provided one more recent year of mortality data for several countries and 2 more years for Switzerland, but removed 1951 data for France.
 - c. Data for Switzerland for the 10th revision (1995-1997) were previously coded with special "G" codes; these remain for 1995-1996, but 1997 has been recoded and now uses the "ICD 10 Tabulation List 1", as do the new years 1998-1999. This involved minor changes to the definition of COPD, but more major problems with continuity in respiratory diseases (non-acute). Consequently, data for this disease definition are not now included for Switzerland after 1994.
 - d. WHO data codes no longer distinguish between the 6th and 7th ICD revisions, but the data are unchanged and the start dates for the 7th revision are still shown in Table 5 and in the 'Country Details' worksheet of each country workbook.
