TABLE 5.1

**Details of studies providing evidence on risk of lung cancer
in filter and plain cigarette smokers**

Study/ Location	Population considered	Period to which filter/plain smoking is relevant	Groups compared				
<u>Prospective studies</u>							
HIRAYA Japan 29 Health Centres	Not stated	Baseline (1965) - followed until 1981	Plain			Filter	
SIDNEY USA San Francisco/ Oakland	Current cigarette smokers (smoked for 20+ years in duration analysis)	Brand usually smoked at baseline (1979-85) or lifetime history (duration analysis) - followed until 1987	(i) Plain			Filter	
			(ii) 0	1-9	10-19	20+ yrs filter	
MRFIT USA 22 centres	Current cigarette smokers	Baseline (1973-76) - followed until 1985	Plain		Filter		
CPSII USA Nationwide	Current cigarette smokers (smoked for 20+ years in % filter analysis)	Lifetime history baseline (1982) - followed until 1988	(i) Only Plain	Mixed		Only Filter	
			(ii) Filter 40% or less			Filter only	
LANGE Denmark Copenhagen	Current cigarette smokers	Baseline (1976) - followed until 1989	Plain		Filter		
ENGELA Norway Nationwide	Current cigarette smokers	Baseline (1964-65) - followed until 1993	Only plain	Mixed		Only filter	
HAWTHO Scotland West Central	Current cigarette smokers	Baseline (1965-1975) - followed until 1977	Plain		Filter		
MIGRAN UK Nationwide	Current cigarette smokers	Baseline (1974-1975) - followed until 1977	Plain		Filter		
RIMING England Manchester	Current cigarette smokers	Baseline (1970-1971) - followed until 1976	Plain		Filter		
TANG UK 4 cohorts	Current man. cig. only smokers	Baseline (1967-1982) - followed for 13 years on average	Plain		Filter		

TABLE 5.1 (Continued)

Study/ Location	Population considered	Period to which filter/plain smoking is relevant	Groups compared				
<u>Case-control studies</u>							
WAKAI Japan Okinawa	Current cigarette smokers	Brand smoked 5 years before interview - interviewed in 1988-1991	Plain	Filter			
CHOI Korea Nationwide	Current and ex cig. smokers	Period of smoking unstated - interviewed in 1985-1988	Only plain	Mixed	Only filter		
MATOS Argentina Buenos Aires	Current and ex cig. smokers separately	Brands smoked in lifetime - interviewed in 1994-1996	Mainly plain	Mainly filter			
PEZZOT Argentina Rosario	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1987-1991	Always plain	Ever filter			
DESTEF1 Uruguay Montevideo	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1988-1994	Ever plain	Always filter			
DESTEF2 Uruguay Montevideo	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1993-1996	Plain	Filter (not further defined)			
CORREA USA Louisiana	Current and ex cig. smokers	Period of smoking unstated - interviewed in 1979-1981	(i)	Plain	Filter (not further defined)		
			(ii)	Plain only	Mixed Filter only		
PATHAK USA New Mexico	Current cigarette smokers	Brands smoked in lifetime - interviewed in 1980-1982	% years smoked filter used				
			0	1-33	34-66	67-99 100	
BROSS USA New York	Current cigarette smokers	Most recent brand smoked - interviewed in 1960-1966	Plain	Filter			
WYNDER USA New York	Current smokers of 1+ cig/day for 20+ years	Brands smoked in lifetime - interviewed in 1966-1969	Plain	Filter (10+ years)			

TABLE 5.1 (Continued 2)

Study/ Location	Population considered	Period to which filter/plain smoking is relevant	Groups compared		
<u>Case-control studies (continued)</u>					
KHUDER USA Philadelphia	Current and ex cig. smokers	Ever smoked filter - interviewed in 1985-1987	Always plain	Ever filter	
BUFFLE USA Texas	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1976-1980	(i) Plain	Filter	
			(not further defined)		
AHF1 USA 6 cities	Current cigarette smokers (≥ 10 years)	Brands smoked in lifetime - interviewed in 1969-1976	Always plain	Switched to F <10 years ago	Switched to F 10+ years ago
			(ii) Always plain Mixed Always filter		
AHF2 USA 45 hospitals	Current cigarette smokers (≥ 10 years)	Brands smoked in lifetime - interviewed in 1977-1995	Always plain	Switched to F (various breakdowns)	Always filter
LUBIN W. Europe 7 centres	Current and ex cig. smokers	Four previous brands smoked - interviewed in 1976-1980	Always plain	Mixed	Always filter
BENHAM France Paris ^{a,b}	Current and ex cig. smokers	Four previous brands smoked - interviewed in 1976-1980	(i) Always plain	Mixed	Always filter
			(ii) Always plain 51-99% $\leq 50\%$ plain plain plain		
BERRIN Italy Milan ^b	Current and ex cig. smokers	Four previous brands smoked - interviewed in 1977-1980	Always plain	<50% filter	$\geq 50\%$ filter Always filter
JOCKEL Germany 5 cities	Current and ex cig. smokers	Last 20 years - interviewed in 1985-1986	Plain	Filter	
ZEMLA Poland Gliwice	Not stated	Not stated	Plain	Filter	
AGUDO Spain Barcelona	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1989-1992	Ever plain	Always filter	
ARMADA Spain Barcelona	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1986-1990	(i) Always plain	Mixed	Always filter
			(ii) Ever (last 20 years) plain filter		

TABLE 5.1 (Continued 3)

Study/ Location	Population considered	Period to which filter/plain smoking is relevant	Groups compared		
<u>Case-control studies (continued 2)</u>					
ALDERS England 10 regions	Current and ex smokers of man. cigs. only	Brands smoked in lifetime - interviewed in 1977-1982	(i) Always plain	Ever filter	
			(ii) Ever plain	Always filter	
			(iii) Always plain	Switched to F <10 years ago	Switched to F 10+ years ago
DEAN N. Ireland Nationwide	Current and ex cig. smokers	Brand last smoked - died in 1960-1962	Plain	Filter	
DEAN2 England Cleveland Co.	Current and ex smokers of man. cigs. only	Brands smoked 1969 (P/F) or 1954-1969 (Switching analyses)- died in 1963-1972	(i) Plain	Filter	
			(ii) Always plain	Switched to F	Always filter
DOLL England 5 regions	Current and ex cig. smokers	Brands smoked in lifetime - interviewed in 1948-1952	Always plain	Ever filter	
<u>Other study (comparison of risk factors in high and low lung cancer risk areas)</u>					
WEINBE USA Pennsylvania	Current cigarette smokers 1973- 1980	Brands smoked 1973-1980 - interviewed in 1980-1981	% filter smokers in two areas		
<u>Other study (comparison of average age at death in filter and plain cigarette smokers)</u>					
KNOTH Germany 3 cities	Current cigarette smokers	Brand last smoked - died in 1967-1976	Plain	Filter	

^a 13 of 16 hospitals in Paris

^b Part of Lubin study

^c Switching analyses exclude those changing number of cigarettes smoked

TABLE 5.2

Relative risk (95% CI) of lung cancer in filter and plain cigarette smokers

^c Based on different source (Benhamou *et al.*, 1989) than other two analyses (Benhamou *et al.*, 1994)

TABLE 6.1

Details of studies providing evidence on risk of lung cancer in relation to tar level

Study/ Location	Population considered	Period to which tar level is relevant	Tar groupings used (mg/cig)
<u>Prospective studies</u>			
SIDNEY USA California	Current cigarette smokers	Brand usually smoked at baseline (1979-1985) - followed until 1987	(i) > 18 11-18 < 11 (ii) per mg tar
MRFIT USA Multicentre	Current cigarette smokers	Brand smoked at baseline (1973-1976) - followed for 10.5 years	(i) \$ 20 16-19 # 15 (ii) per mg tar
CPSI USA 25 studies	Current cig. only smokers	(i) Brand smoked at first interview (1959-60) - followed until 1966 (ii) Brand smoked at fourth interview (1965-66) - followed until 1972	High T/N Medium T/N Low T/N ^a High T/N Medium T/N Low T/N ^b
SPEIZE USA Nationwide	Current cigarette smokers	Brand smoked in 1978 - followed until 1992	Quartiles or tertiles ^c
CPSII USA Nationwide	Current cigarette smokers	Brand smoked at baseline (1982) - followed until 1986	per mg tar
BENSHL England London	Current cigarette smokers	Brand smoked at baseline (1967-1969) - followed for 10 years	\$ 33 24-32 18-23
TANG 4 UK Cohorts	Current man. cig. only smokers	Brand smoked longest in 3 cohorts, at baseline in 1 cohort (1967-1982) - followed for 13 years ^d	per mg tar
<u>Case-control studies</u>			
WILCOX USA New Jersey	Current cigarette smokers 1973- 1980	Brands smoked 1973-80 - interviewed in 1980-81	21-28 17.6-21 14.1-17.5 # 14.0

TABLE 6.1 (Continued)

Study/ Location	Population considered	Period to which tar level is relevant	Tar groupings used (mg/cig)					
			15+	10-14	< 10			
AHF2 USA 45 hospitals	Current ever filter cigarette smokers (≥ 10 years)	Brands smoked in lifetime - interviewed in 1977-1984	15+	10-14	< 10			
KAUFMA USA/Canada 7 cities	Current cigarette smokers	Brand smoked for at least 75% of years smoking, all years of smoking and 10 years before admission - in 1981-1986	29+	22-28	< 22			
LUBIN Europe 7 centres	Current and former cig. smokers	Four previous brands smoked - mean tar weighted by amount smoked calculated - interviewed in 1976-1980	VI 29.8	V 25.2	IV 23.6	III 20.6	II 18.5	I 15.6
BENHAM France Paris ^{e,f}	Current and former cig. smokers	Four previous brands smoked - interviewed in 1976-1980	Use of 30+ mg tar cigarettes > 75%	51-75%	# 50%			
VUTUC Austria Nationwide ^f	Current and former cig. smokers	Main brand and brand smoked exclusively in lifetime - interviewed in 1976-1980	> 24	15-24	< 15			
ALDERS England Multicentre	Current and former man. cig. only smokers	Brand smoked at various times before admission - interviewed in 1977-1982	(i) (ii) (iii)	29+ 29+ 17-22	23-28 23-28 0-16	17-22 0-22 (at admission)		
GILLIS Scotland West ^e	Current cigarette smokers	Lifetime smoking history - Mean tar weighted by amount smoked calculated - interviewed in 1976-1981	23+	-22				
<u>Other study</u> (comparison of risk factors in high and low lung cancer risk area)								
WEINBE USA Pennsylvania	Current cigarette smokers	Brand smoked at interview in 1978-79	Mean tar					

TABLE 6.1 (Continued 2)

Notes

- ^a For the 1960-66 follow-up, high T/N = 2.0 to 2.7 mg nicotine and 25.8 to 35.7 mg tar, low T/N = < 1.2 mg nicotine and (usually) < 17.6 mg tar and medium T/N = intermediate, based on interview 1 (1959-1960).
- ^b For the 1966-72 follow-up, high T/N = high as note a for interview 1 and high or medium as note a for interview 4, low T/N = low as note a for interview 1 and either low or medium as note a for interview 4 (1965-66) or as low on both interview 2 (1961-62) and interview 4.
- ^c The authors stated tar values were divided into tertiles and then presented comparisons of the top and bottom quartiles. Actual tar values were not given.
- ^d Average follow-up period 12.8 years, maximum 19.4 years for cohort interviewed in 1967-1970.
- ^e 13 of 16 hospitals in Paris.
- ^f Part of LUBIN study.

			1.00	0.73(0.52-1.01)		
			1.00	0.74(0.53-1.03)		
<u>Other study</u>						
WEINBE (Weinberg <i>et al.</i> , 1982)						
None	378HR ^h 607LR	Males	<u>Mean tar content</u>			
			High risk area : 18.7 mg Low risk area : 16.8 mg (Not significant)			

Notes

- ^a Period 1 = 1960-66, Period 2 - 1966-72, Numbers are "adjusted" deaths (see Hammond *et al.*, 1976).
- ^b The three sets of relative risks are (i) adjusted for age and employment grade only, (ii) adjusted for inhalation ever and (iii) adjusted for cigs/day also.
- ^c The three sets of relative risks are (i) adjusted for cigs/day, (ii) adjusted for duration and (iii) adjusted for cigs/day and duration. Wilcox *et al.* (1988) noted age adjustment had little additional effect.
- ^d Tar categories - see Table 6.1.
- ^e The first set of relative risks is adjusted for age only, the second set for all the variables listed.
- ^f Results for < 15 mg/cig based on very few cases and unreliable.
- ^g The two sets of relative risks are (i) unadjusted and (ii) adjusted for cigs/day.
- ^h HR = high risk area (Lawrenceville), LR = low risk area (South Hills).

DESTEF2 ^d	Male	1.78 (1.15-2.76)	1.77 (0.96-3.26)	1.20 (0.54-2.63)	-
BENHAM ^e	Male	-	3.63 (2.05-6.42) ^f	-	-
4 studies (excluding BENHAM)	Fixed-effects Random-effects	1.68 (1.36-2.08) 1.68 (1.36-2.08)	1.96 (1.44-2.67) 1.98 (1.38-2.82)	1.64 (1.17-2.32) 1.64 (1.17-2.32)	-

Notes

^a See Table 8.1 for references, details of studies and adjustment factors used except where stated.

^b From De Stefani *et al* (1992). Adjusted for age, residence, urban/rural, education, cigs/day, duration, years since quit, filter/plain.

^c All cases with histology. 2.73 (0.82-9.12) for other types of lung cancer.

^d From De Stefani *et al* (1996c), for men never exposed to asbestos.

^e From Benhamou *et al* (1985).

^f Results only given for Kreyberg I.

TABLE 9.1

**Relative risk (95% CI) of lung cancer in mentholated
vs non-mentholated cigarette smokers**

Study details	Population considered, adjustment factors and number of cases ^a	Sex and lung cancer type ^b	Relative risks (95% CI)			
<u>AHF2 (Kabat and Hebert, 1991)</u>						
			<u>Duration of menthol use</u>			
			<u>< 1 yr (base)</u>	<u>1-14 yrs</u>	<u>15+ yrs</u>	
USA Multicentre Case-control 1985-1990	Current cigarette smokers ^c	Men	1.00	1.14(0.82-1.59)	0.98(0.70-1.38)	
		Women	1.00	0.82(0.52-1.28)	0.76(0.53-1.16)	
	Adjusted for sex, age, cigs/day, duration, race, education, inhalation, and BMI	Sexes combined				
		- squamous cell	1.00	1.17(0.78-1.78)	0.92(0.60-1.42)	
		- small cell	1.00	0.80(0.43-1.48)	0.86(0.49-1.51)	
	- large cell	1.00	1.99(0.73-5.41)	0.84(0.27-2.61)		
	- adenocarcinoma	1.00	0.98(0.68-1.42)	0.95(0.66-1.36)		
588M + 456F cases						
<u>SIDNEY (Sidney et al, 1995)</u>						
			<u>Menthol use</u>			
			<u>No (base)</u>	<u>Yes</u>

	Adjusted for age, race, total pack years, years since quit		<u>0 (base)</u>	<u>≥ 0-15</u>	<u>16-31</u>	<u>32+</u>
Men		1.00	0.87(0.57-1.37)	1.21(0.56-2.62)	1.48(0.71-3.05)	
	Women	1.00	1.58(0.77-3.22)	0.51(0.19-1.34)	0.41(0.15-1.11)	
202M + 135F cases						

TABLE 9.1 (Continued)

Notes

^a Numbers of cases are those considered in the analyses.

^b All lung cancer types unless stated.

^c Current smokers defined as smokers in year preceding diagnosis.

^d Only statistically significant trends are indicated.

TABLE 9.2

Mentholated cigarettes - meta-analysis of results for regular use

Study	Comparison ^a	Relative risk (95% CI)	
		Men	Women
AHF2	15+ vs. < 1 yrs menthol use	0.98(0.70-1.38)	0.76(0.53-1.16)
SIDNEY	20+ vs. 0 yrs menthol use	1.59(0.96-2.63)	0.70(0.40-1.23)
CARPEN	32+ vs. 0 pack-years of menthol	1.48(0.71-3.05)	0.41(0.15-1.11)
Combined	Fixed-effects	1.18(0.91-1.53)	0.70(0.52-0.95)
	Random-effects	1.23(0.88-1.72)	0.70(0.52-0.95)

Notes

^a See Table 9.1 for details of adjustment factors and other study details.

TABLE 9.3

Relative risk (95% CI) of lung cancer by nicotine level of brand smoked

Study details	Population considered, adjustment factors and number of cases ^a	Sex	Relative risk (95% CI)	
<u>MRFIT (Kuller et al, 1991)</u>			<u>Nicotine level (mg)^b</u>	
USA Multicentre Prospective 1973-1976 Followed to 1985	Cigarette smokers at screen 1 Adjusted for age, serum cholesterol, diastolic blood pressure and cigarettes/day 95M cases	Male	<u>1.5+ (base)</u> 1.00	<u>1.1-1.4</u> 0.66 (0.42-1.04) <u>≤1.0</u> 0.68 (0.40-1.17)
		Male		<u>Per mg nicotine^c</u> 1.51 (0.74-3.09)
<u>MRFIT (Ockene et al, 1990)</u>			<u>Per mg nicotine^c</u>	
As above	As above but adjusted also for tar yield, filter/non-filter, age at start, alcohol and serum thiocyanate	Male		6.75 (0.49-94.2)

Notes^a Number of cases considered in analyses.^b RR and CI converted from values given with ≤ 1.0 mg as base.^c Estimated from regression coefficients and standard errors.

TABLE 9.4

Relative risk (95% CI) of lung cancer in bidi vs. cigarette smokers

Study details	Population considered, adjustment factors and number of cases	Sex - cigs/day, duration, religion	Relative risk (95% CI)		
<u>NOTANI (Notani et al, 1977)</u>			<u>Product smoked</u>		
India Bombay	Smokers of bidis or cigarettes	Male -	<u>Cigs only (base)</u>	<u>Mixed</u>	<u>Bidis only</u>
Case-control 1963-1971	Unadjusted for any variables except where stated	Total (unadjusted)	1.00	0.70 (0.43-1.13)	1.38 (1.01-1.88)
		<10/day	1.00		3.76 (1.53-9.23)
		10-19/day	1.00		1.15 (0.68-1.94)
		20+/day	1.00		1.07 (0.67-1.70)
	549 M cases	Total (adjusted for cigs/day)	1.00		1.38 (1.01-1.88)
<u>JUSSAW (Jussawalla and Jain, 1979)</u>			<u>Product smoked</u>		
India Bombay	Smokers of bidis or cigarettes	Male -	<u>Cigs only (base)</u>	<u>Mixed</u>	<u>Bidis only</u>
Case-control 1964-1973	Unadjusted for any variables except where stated	Total (unadjusted)	1.00	6.72 (2.78-16.2)	3.24 (2.25-4.68)
		<10/day	1.00		5.00 (2.19-11.4)
		10-19/day	1.00		3.54 (2.08-6.04)
		20+/day	1.00		2.68 (1.17-6.14)
	643 M cases	Total (adjusted for cigs/day)	1.00		3.60 (2.43-5.34)
		<20 years	1.00		2.19 (1.30-3.70)
		20-29 years	1.00		5.03 (2.49-10.2)
		30+ years	1.00		4.14 (1.84-9.33)
		Total (adjusted for duration)	1.00		3.17 (2.18-4.61)
		Hindus	1.00	7.86 (1.76-35.2)	2.81 (1.64-4.81)
		Muslims	1.00	5.43 (1.15-25.7)	1.97 (0.94-4.14)
		Christians	1.00	5.33 (1.10-26.0) ^a	6.26 (2.39-16.4)
		Others	1.00		1.71 (0.26-11.4)
		Total (adjusted for religion)	1.00	6.15 (2.52-15.0)	2.84 (1.93-42.0)

TABLE 9.5

Relative risk (95% CI) of lung cancer in smokers of brands local and not local to Okinawa

Study details	Population considered, adjustment factors and numbers of cases	Sex - lung cancer type	Relative risk (95% CI)	
<u>WAKAI (Wakai et al, 1977)</u>			<u>Brand smoked</u>	
			<u>Not local (base)</u>	<u>Local</u>
Japan Okinawa Case-control 1988-1991	Current and ex-smokers of cigarettes Adjusted for age, cigs/day, duration inhalation, age at start, fraction smoked per cig, years since quit and filter/plain	Male - all - squamous cell carcinoma - adenocarcinoma	1.00 1.00 1.00	1.45(1.02-2.07) 1.75(1.10-1.78) 1.35(0.83-2.17)
	235M			

TABLE 9.6

Relative risk (95% CI) of lung cancer in pilli^a vs. pölli smokers^b

Study details	Population considered, adjustment factors and number of cases	Sex	Relative risks (95% CI)	
			Type of cigarette	
<u>PERNU (Pernu, 1960)</u>			<u>Pölli (base)</u>	<u>Pilli</u>
Finland	Current or ex-smokers for 10+ years	Male	1.00	0.96 (0.76-1.23)
Helsinki Case-control 1944-58		Female	1.00	0.39 (0.13-1.12)
Unadjusted		1138M + 17F cases		

Notes

^a Pillis have an attached "holder" made of cardboard, but no actual filter.

^b Pöllis include short cigarettes smoked with short wooden mouthpiece and cigarettes of American-type.

TABLE 10.1

Summary of meta-analyses for major cigarette type comparisons

Comparison	Sex/histological type	Number of estimates Total (significant) ^a	Meta analysis relative risk (95% CI)
Filter/plain ^b	Males	28 (13-)	0.58(0.55-0.62)
	Females	14 (5-)	0.67(0.59-0.75)
	Sexes combined	43 (19-)	0.59(0.56-0.63)
	Sexes combined - sq. carcinoma ^b	11 (4-)	0.56(0.50-0.62)
	- adenocarcinoma ^c	8 (2-)	0.84(0.71-1.00)
Low tar/high tar ^c	Males	13 (4-)	0.77(0.69-0.86)
	Females	9 (4-)	0.82(0.70-0.97)
	Sexes combined	22 (8-)	0.79(0.72-0.86)
Ever hand rolled/ manuf. cigs only ^d	Males	10 (4+)	1.43(1.27-1.61)
	Females	5 (1+)	1.21(0.87-1.69)
	Sexes combined	15 (5+)	1.41(1.26-1.57)
Ever black/ blond only ^e	Males	8 (4+)	1.69(1.46-1.94)
	Females	3 (0)	1.91(1.11-3.29)
	Sexes combined	12 (5+)	1.71(1.50-1.96)
Mentholated/non mentholated cigarettes ^f	Males	3 (0)	1.18(0.91-1.53)
	Females	3 (0)	0.70(0.52-0.95)
	Sexes combined	6 (0)	0.94(0.78-1.15)

Notes

^a n- implies n decreases significant at $p < 0.05$, n+ indicates significant increases.

^b Using most extreme groups for comparison where more than two groups being compared.

^c Lowest vs. highest tar groups from data provided.

^d See Table 7.2 for meta-analyses for hand rolled only and mixed hand rolled/manufactured.

^e See Table 8.2 for meta-analyses for black only and mixed black/blond.

^f Regular menthol vs. no or minimal menthol use.
